

## **Brief portfolio Sarah Rebouh**

The portfolio hybrid mobile app project is part of my formation at Access Code School in Besançon. I imagine a simple hybrid mobile app for a clear user experience. I use the social network model to create my navigation.

The first page invites the user to touch a camera lens which will turn around it and opens on the homepage. The home page consists of a cloud of hashtags which defines me. When you touch a hashtag, a page comes out of the bottom with a little explanation. You can shut the page with a cross.

You can find a menu at the foot of the app. With this navigation, you can simply browse the mobile app.

**When you touch the button “compétences”**, you land on a menu with bubbles. Each bubble move on the screen and you need to touch one to open another page. When you choose a bubble, other little bubbles appear with technology logos that I know.

**When you touch the button “diplôme”**, you can see my school curriculum in the bubbles. When you touch a bubble, a popup arrive with different information like the year of obtaining, the place and some precisions.

**When you touch “portfolio”**, you have the same menu with bubbles and when you press a bubble you land in another page. You need to scroll to see all the projects. You can read the title, a little description and a link to each project. Finally, you can contact me with the contact page. You can see my github, twitter or Linkedin contact.

**You can watch my wireframe just below.**

## I. The choice of technology

### ► Vue.js

To make my project, I am choosing the framework Vue.js because it's as simple as my application. Vue.js is a library that focuses heavily on the ViewModel. It's an independant framework. It's easy to use and take in hand. With Vue.js, you don't need a laborious installation. We just need a link to the CDN.

```
<script src="https://cdnjs.cloudflare.com/ajax/libs/velocity/1.2.3/velocity.min.js"></script>
```

The Vue.js community is less developed than Angular or React but I find a nice curated list of nice things related to Vue.js, here : <https://github.com/vuejs/awesome-vue>

Here, <https://vuejsfeed.com/category/showcase>, you can see some examples of project or libraries.
